

Cocoon Coatings has been established nationally for over 15 years protecting our client's assets and their bottom line.

**Kooweerup Regional Health Service (KRHS)
Project aim:**

We were engaged by KRHS to apply our infrared heat reflective waterproof membrane to remove several major concerns over the entire roof:

- Internal heat reduction, reduce energy consumption
- Address and rectify all roof defects
- Reduce roof water leaks, therefore reducing insurance claims
- Increase lifespan warranty for ten years
- Removal of ongoing roof maintenance costs

KRHS has recently been awarded **gold** in Climate Leadership and **silver** in Climate Resiliency from Global Green and Healthy Hospitals international awards for the Pacific region. They have acknowledged our infrared heat reflective waterproof membrane as a contributing factor to their success in receiving the awards.

"The heat load has been reduced internally by 5-8°C and has been so successful that additional roofing around the facility has also been treated."

**- Terrona Ramsay
Former CEO/DON of KRHS**

"Cocoon coating improves the thermal performance of the project. The nanoceramic in the membrane genuinely reflects heat more effectively than regular paint."

**- Judith North
Architect Director of NOWarchitecture**

We can assist in protecting your buildings and improving your energy efficiency.

Cocoon Coatings provides an elastomeric solar heat reflective waterproof membrane that has been independently tested.

Project brief: KooWeeRup Regional Health Service

Kooweerup Regional Health Service (KRHS) enlisted the services of Cocoon Coatings and in 2016, won international awards in two categories for the Pacific area from Global Green and Healthy Hospitals for their leadership role in the movement toward a low carbon health sector and a healthy climate.

KRHS have stated:

"Building and infrastructure vulnerabilities were assessed by an Independent Environmental Sustainability Practitioner and initiatives such as the heat reflective coating on the residential care facility roof were implemented, reducing the heat load by between 5 – 15 degrees."

The awards received were: SILVER- Climate Resiliency, GOLD- Climate Leadership

Kooweerup
REGIONAL HEALTH SERVICE

Just like KRHS, we can offer you:

- ❖ Infrared heat reflective waterproof membrane
- ❖ Energy reduction
- ❖ Return on Investment
- ❖ BCA Compliant
- ❖ Complies with AS/NZS 4859:1
- ❖ Roof refurbishment
- ❖ Waterproofing
- ❖ Asbestos encapsulation

"Providing adequate thermal comfort and waterproofing services is integral to the provision of high quality educational facilities across the state."

- **The Hon James Merlino MP, Minister of Education**

"The heat load has been reduced internally by 5-8°C and has been so successful that additional roofing around the facility has also been treated."

- **Terrona Ramsay
