

## Commercial roof waterproofing

**Cocoon Coatings** applies a waterproof and infrared heat reflective membrane to the entire roof, providing a waterproof seal over a problem or aged roof.

In many situations we have solved our client's concerns relating to roof replacement or ongoing insurance claims for water ingress and damaged equipment, furnishing, stock, safety and tenancy issues, all which have a direct cost impact.

By removing all of the issues mentioned above and providing a true cost saving in air conditioning over the summer period, we can offer a return on invest within a very short time.

We have discovered our cost of application is approximately 30% of the roof replacement, in standard building and location.

All workmanship and products are warrantied up to fifteen years, accredited to meet Building Codes of Australia standards and complying to ASNZ 4859.1 Australian Insulation standards, providing our clients with confidence in our capabilities.

*"The heat load has been reduced internally by 5-8°C and has been so successful that additional roofing around the facility has also been treated."*

**- Terrona Ramsay**  
**Former CEO/DON of KRHS**

*"Cocoon coating improves the thermal performance of the project. The nanoceramic in the membrane genuinely reflects heat more effectively than regular paint."*

**- Judith North**  
**Architect Director of NOWarchitecture**

*"Providing adequate thermal comfort and waterproofing services is integral to the provision of high quality educational facilities across the state."*

**- The Hon James Merlino MP**  
**Minister of Education**
