

## Knox City Council

**Cocoon Coatings** has been involved in an energy initiative program with Knox City Council. The aim was to reduce energy consumption costs at Knox Civic Centre and has achieved reduction in energy costs, with the replacement of internal lighting to LED, once this work was performed the energy saving had reduced. As shown in graph.

Cocoon Coatings then applied a waterproof and infrared heat reflective membrane to the roof; as noted in graph further reductions were achieved. Therefore, the additional energy savings is \$30,000.00 p.a.

- ❖ Building Codes of Australia, Section J Energy Efficiency
- ❖ Complies with Australian Insulation Standards AS/NZS 4859:1

*"The heat load has been reduced internally by 5-8°C and has been so successful that additional roofing around the facility has also been treated."*

- Terrona Ramsay  
Former CEO/DON of KRHS

*"Cocoon coating improves the thermal performance of the project. The nanoceramic in the membrane genuinely reflects heat more effectively than regular paint."*

- Judith North  
Architect Director of NOWarchitecture

We can assist in protecting your buildings and improving your energy efficiency.
