

Cocoon Coatings provides an elastomeric solar heat reflective waterproof membrane that has been independently tested.

Residential project South Yarra

Project aim:

Infrared heat reflective, waterproof membrane. Roof over 30 years old. Restored to a position where we have offered a 15 year warranty on products and workmanship.

- ❖ Building Codes of Australia, Section J Energy Efficiency
- ❖ Complies with Australian Insulation Standards AS/NZS 4859:1

"Cocoon coating improves the thermal performance of the project. The nanoceramic in the membrane genuinely reflects heat more effectively than regular paint."

- Judith North
Architect Director of NOWarchitecture

"The heat load has been reduced internally by 5-8°C and has been so successful that additional roofing around the facility has also been treated."

- Terrona Ramsay
Former CEO/DON of KRHS

"Providing adequate thermal comfort and waterproofing services is integral to the provision of high quality educational facilities across the state."

- The Hon James Merlino MP
Minister of Education

We can assist in protecting your buildings and improving your energy efficiency.
